PROFILE

Full-Stack Software Engineer with 4+ years turning business problems into scalable web, mobile, and AI systems for government and enterprise clients. I own outcomes end to end — scoping the problem, then architecting the database, API, UI, and deployment that solve it. My platforms digitised revenue collection for **60+ local authorities** across Zimbabwe, replacing manual, paper-based processes at national scale.

EXPERIENCE

Software Developer 2021 – Present
LADS Africa · Harare, Zimbabwe

- Architected a multi-tenant local-authority platform now live at **60+ councils**, unifying procurement, licensing, CRM and billing — replacing paper-based revenue collection and cutting ~10 hrs/week of manual reconciliation per council.
- Re-architected batch reporting onto an asynchronous, queue-based pipeline (Laravel queues + Redis), cutting report generation from ~15 min to under 30 s and eliminating peak-billing timeouts that stalled council operations.
- Integrated ZIMRA fiscalization end to end, bringing 60+ councils into statutory tax compliance and unblocking legally-required e-invoicing across the platform — \$25 M+ in revenue processed to date.
- Owned modules end to end within a 15-engineer team — schema to UI — standardising REST contracts between Laravel/Django and React to raise feature-delivery velocity and shrink integration rework.

SELECTED PROJECTS

LADS Local Authority ERP [Laravel](#) · [Livewire](#)
45+ modules powering revenue collection for 60+ councils — ZIMRA fiscalization and async reporting replacing manual billing at national scale.

MineraERP — Mining ERP (MMCZ) [Laravel](#) 13
IAS 16 asset-revaluation engine and ZIMRA/ASYCUDA integration that automated statutory customs-export accounting, removing error-prone manual filings.

MinutePark — Parking Enforcement [Flutter](#) · [Laravel](#)
Offline-first sync (ObjectBox) and Bluetooth printing let officers keep issuing tickets with zero connectivity — sustaining revenue capture in the field.

Trade — Algorithmic Trading Bot [FastAPI](#) · [React](#)

EDUCATION

B.Tech (Hons) Software Engineering
Harare Institute of Technology
2021 – 2025

HIGHLIGHTS

60+ councils served
4+ years shipping production software
10 full-stack, mobile & AI builds
15+ engineer team

LANGUAGES

English — Fluent · Shona — Native

Event-driven engine with backtesting and a risk layer, executing Deriv/Alpaca strategies over live WebSocket streams to enforce disciplined, rule-based trades.

Biometric ATM System [Django](#) · [React](#)

WebAuthn fingerprint auth with AES-encrypted templates and a fraud engine — cutting card-based fraud exposure in self-service banking.

SahwiGate — Athletics API [Fastify](#) · [Prisma](#)

Production-grade athletics backend — BullMQ job queues and Stripe payments behind a Swagger-documented, fully-tested API, letting organisers run paid event registration end to end.
